

The diagram illustrates a network system 10. A central cloud-shaped area represents the network 16, containing two routers 18 connected by a horizontal line with three dots in between. On the left side of the network 16, an IAD 14 is connected to the network. This IAD 14 is further connected to three CPEs 12, each connected via a separate line. A bracket labeled 20 groups these three CPEs. Similarly, on the right side of the network 16, another IAD 14 is connected to the network, which is then connected to three CPEs 12, also grouped by a bracket labeled 20.
